                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 170

US-10-160-786-45/c

US-10-160-786-45/c

Sequence 45, Application US/10160786

Publication No. US20030225013A1

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Kenneth W. Dobie
TITLE OF INVENTION: ANTISENSE MODULATION OF PHOSPHOINOSITIDE-3-KINASE, REGULATORY SUE
TITLE OF INVENTION: P150 EXPRESSION
FILE REPERENCE: RTS-0376
CURRENT PRELICATION NUMBER: US/10/160,786
CURRENT PILING DATE: 2002-05-31
                                                                 RESULT 168
